Instructions to Students for Community Service Project

Please read the detailed Guidelines on Community Service Project hosted on the website of AP State Council of Higher Education https://apsche.ap.gov.in

Link:
https://apsche.ap.gov.in/Pdf/Guidelines%20for%20the%20OJT%20Internship%20Community%20Service%20Project.pdf

1. It is mandatory for all the students to complete 2 months (180 hours) of Community Service Project as a part of the 10 month mandatory internship/on the job training.
2. Consider yourself as a committed volunteer in the community, you work with.
3. Every student should identify the village/community/habitation for Community Service Project (CSP) in consultation with the College Principal/the authorized person nominated by the Principal.
4. Report to the community/habitation as per the schedule given by the College. You must make your own arrangements of transportation to reach the community/habitation.
5. You will be assigned with a Faculty Guide from your College. He/She will be creating a WhatsApp group with your fellow volunteers. Post your daily activity done and/or any difficulty you encounter during the programme.
6. You should maintain punctuality in attending the CSP. Daily attendance is compulsory.
7. You are expected to learn about the community/habitation and their problems.
8. Know the leaders and the officials of the community/habitation.
9. While in project, always wear your College Identity Card.
10. If your College has a prescribed dress as uniform, wear the uniform daily.

Identify at least five learning objectives in consultation with your Faculty Guide. These learning objectives can address:

- Information about the community, including the realities and problems of the society.
- Need for creating awareness on socially relevant aspects/programs.
- Acquiring specific Life Skills.
- Learning areas of application of knowledge and technologies related to your discipline.
- Identifying developmental needs of the community/habitation.

11. Practice professional communication skills with team members, and with the leaders and officials of the community. This includes expressing thoughts and ideas effectively through oral, written, and non-verbal communication, and utilizing listening skills.
12. **Be regular in filling up your Program Book. It shall be filled up in your own handwriting. Add additional sheets wherever necessary.**
13. At the end of Community Service Project, you shall be evaluated by the person in-charge of the community/habitation to whom you report to.
14. There shall also be evaluation at the end of the community service by the Faculty Guide and the Principal.
15. Do not indulge in any political activities.
16. Ensure that you do not cause any disturbance to the inhabitants or households during your interaction or collection of data.
17. Be cordial but not too intimate with the persons you come across during your service activities.
18. You should understand that during this activity, you are the ambassador of your College, and your behavior during the community service programme is of utmost importance.
19. If you are involved in any discipline related issues, you will be withdrawn from the programme immediately and disciplinary action shall be initiated.
20. Do not forget to keep up your family pride and prestige of your College.
21. Remember that you are rendering valuable service to the society and your role in the community development will become part of the history of the community.

Subject: Request for Permission to Conduct Community Service Project (CSP) on Food Habits

Respected Sir/Madam,

I am a student of Sree Venkateswara College of Engineering, pursuing my degree in Artificial Intelligence and Machine Learning (AI&ML). As part of our academic curriculum, my project teammates and I are undertaking a Community Service Project (CSP) on **"Promoting Healthy Food Habits,"** aimed at creating awareness about the importance of balanced nutrition, adopting wholesome eating habits, and maintaining a healthy lifestyle.

As part of this initiative, we intend to conduct an interactive session on food habits and awareness for the people of Nellore. The session will cover the importance of nutritious diets, understanding food groups, encouraging the reduction of processed food, and addressing common dietary issues. We will also motivate people to adopt healthier cooking methods and make informed, mindful dietary choices to improve overall community wellness.

We will carry out the project under the guidance of our faculty coordinator and in strict adherence to any conditions you may prescribe.

I kindly request you to grant us permission to conduct this project in Nellore and interact with the local community for this purpose. I would be grateful for your guidance on a suitable venue and timing for the awareness session.

Thanking you,

Yours faithfully,

Names of Project Team Members:

1. P. Vinod Kumar 2. P. Venkatesh 3. N. Mokshagnya Teja
4. Y. Chandra Babu 5. S. Chaithanya

ACKNOWLEDGEMENTS

I would also like to express my gratitude to the people of Vidavalur Village for helping us understand their traditional food practices, daily meal patterns, and food preferences.

Interacting with community members provided valuable insights into how family traditions, economic conditions, seasonal availability, and personal choices influence food habits. Their cooperation helped us understand the importance of studying food habits within the local community.

This Community Service Project has helped me recognise the importance of nutrition and its relationship with overall health and well-being. Through this project.

I gained a better understanding of the value of balanced meals, regular eating habits, the consumption of fruits and vegetables, adequate water intake, and proper food hygiene. It also highlighted the importance of creating awareness about healthy and affordable food choices among students and families.

I am thankful to the students, parents, and other residents who willingly shared their opinions and experiences during our interactions. Their responses helped us identify topics that may benefit from further awareness, including nutritious food choices, reducing excessive consumption of sugary drinks and packaged snacks, maintaining personal hygiene, and ensuring the safe preparation and storage of food.

Furthermore, this project provided me with an opportunity to apply my academic learning to a real-world community situation. It improved my ability to communicate with different groups of people, prepare survey questions, organise information, work collaboratively, and present observations systematically. These experiences have strengthened my sense of social responsibility and helped me understand the role students can play in community development.

Finally, I sincerely thank everyone who supported and encouraged me throughout this project. Their valuable cooperation made this learning experience meaningful and memorable. I hope that the observations and recommendations presented in this report will contribute to greater awareness of healthy food habits and encourage practical, affordable, and hygienic food practices among students and community members in Vidavalur Village.

P.vinod Kumar Reddy(24JNA33127)

CHAPTER 1: EXECUTIVE SUMMARY

The Community Service Project (CSP) titled ***"A Study on Food Habits of Students and Community Members in Vidavalur Village, Nellore District, Andhra Pradesh"*** *aims to understand the daily food habits of students and local residents. The study focuses on their meal patterns, breakfast habits, consumption of fruits and vegetables, drinking water, and food hygiene practices.*

The project aims to create awareness about the importance of healthy and balanced food habits. It considers factors such as family traditions, food availability, economic conditions, personal preferences, and daily schedules that may influence people's food choices.

Students' food habits are an important part of this study because nutritious food supports physical growth, energy, concentration, and learning. The project also considers the traditional food practices of villagers and the availability of locally grown foods, including rice, pulses, vegetables, leafy greens, and seasonal fruits.

Food hygiene and safety are also important aspects of the project. Practices such as washing hands before meals, cleaning fruits and vegetables, drinking safe water, and storing food properly can help maintain good health. The project aims to encourage community members to follow these simple practices in their daily lives.

Through surveys, interactions, and community awareness activities, this project helps students understand local needs and develop communication, teamwork, leadership, and problem-solving skills. Overall, the project connects academic learning with community service and encourages healthier food choices among students and residents of Vidavalur Village.

In conclusion, the Food Habits Community Service Project aims to connect student learning with the everyday needs of the community. By studying food practices and promoting awareness of nutrition, hydration, and food hygiene, the project seeks to encourage informed and practical choices among students and villagers. The knowledge gained through this experience can help the student team understand the importance of community participation and social responsibility in supporting a healthier society.

CHAPTER 2: OVERVIEW OF THE COMMUNITY

Vidavalur is a village located in Vidavalur Mandal, SPSR Nellore District, Andhra Pradesh. The community consists of families from different backgrounds who follow their traditional lifestyles and cultural practices. Agriculture, small businesses, daily-wage work, and other local occupations contribute to the livelihoods of residents.

The village community includes children, students, adults, and elderly people. Educational institutions and local community facilities support the daily needs of residents. People interact with one another through social gatherings, cultural events, and village activities, helping maintain relationships and community cooperation.

Food habits are an important part of the lifestyle of the people in Vidavalur. Rice is commonly consumed as a staple food, along with pulses, vegetables, leafy greens, and other locally available foods. Food choices may vary according to family income, personal preferences, seasonal availability, and traditional practices.

Awareness of nutrition, food hygiene, and healthy eating habits is important for improving community well-being. Following practices such as washing hands before eating, drinking safe water, consuming a balanced diet, and maintaining cleanliness while preparing food can help people protect their health.

This Community Service Project focuses on understanding the food habits of students and community members in Vidavalur Village. Through surveys, direct interactions, and observation, the project aims to understand local food practices and identify opportunities to promote healthy eating habits. It also helps students develop social responsibility, communication skills, teamwork, and practical knowledge about community needs.

In conclusion, Vidavalur Village provides a suitable environment for understanding the food habits, lifestyles, and health awareness of rural communities. Studying the community helps identify the importance of nutritious food, safe drinking water, and hygienic practices in everyday life.

The project also highlights the importance of understanding people's food choices and the factors that influence their daily diets. Creating awareness about balanced nutrition and healthy eating habits can encourage students and families to make better food choices according to their needs and available resources.

Community participation plays an important role in improving health awareness. Through discussions, surveys, and interactions with local residents, students can understand community needs and suggest practical measures to promote healthier lifestyles.

This project provides an opportunity to connect classroom learning with real-life community issues. It also helps students improve their communication, teamwork, observation, and problem-solving skills while developing a sense of social responsibility.

CHAPTER 3: COMMUNITY SERVICE PART

As part of the Community Service Project (CSP), we visited Vidavalur Village in SPSR Nellore District, Andhra Pradesh, to understand the food habits and dietary practices of students and community members. The main objective was to study their daily eating patterns, food preferences, nutritional awareness, and hygiene practices. This project provided an opportunity to interact with local residents and understand their lifestyles and food choices.

During the community visit, we interacted with students and local residents to learn about their regular meals, breakfast habits, consumption of fruits and vegetables, and drinking water practices. We also considered various factors that influence food choices, including family traditions, economic conditions, food availability, personal preferences, age, occupation, and daily routines. These interactions helped us understand that food habits can vary from person to person and family to family.

The project focused on understanding the relationship between food habits and overall health. A balanced diet provides essential nutrients required for the proper growth and functioning of the body. We highlighted the importance of including fruits, vegetables, pulses, leafy greens, and other nutritious foods in daily meals. We also emphasized the importance of maintaining regular meal timings and choosing fresh, nutritious foods whenever possible.

Another important aspect of the project was creating awareness about food hygiene and safety. We highlighted simple practices such as washing hands before eating, cleaning fruits and vegetables before consumption, drinking safe water, keeping food covered, and maintaining cleanliness while preparing and storing food. These practices can help reduce the risk of foodborne illnesses and support a healthier lifestyle.

We also discussed the importance of avoiding excessive consumption of packaged snacks and sugary drinks. Developing healthy eating habits from an early age can support children's physical growth, energy levels, and concentration. Families can encourage children to choose nutritious foods and maintain healthy daily routines. Awareness about nutrition should be shared in simple language so that people can understand and follow these practices in their everyday lives.

As part of the study, we aimed to collect information through questionnaires, observations, and discussions with community members. The collected information can help us understand common food practices and identify areas where nutritional awareness may be useful. The project also helped us recognize that recommendations should consider people's economic conditions, food availability, cultural practices, and individual needs.

Community participation played an important role in this activity. Through direct interactions, we gained a better understanding of the community's needs and the importance of communicating respectfully with people from different backgrounds. We learned that small changes in daily food habits and hygiene practices can contribute to improved health and well-being over time.

This project also provided valuable practical learning beyond the classroom. We developed communication, teamwork, leadership, observation, data collection, time management, and problem-solving skills. Working with community members helped us connect our academic knowledge with real-life situations and understand the importance of identifying community needs before suggesting possible improvements.

In conclusion, the Community Service Project on food habits in Vidavalur Village was a meaningful learning experience. It helped us understand the importance of balanced nutrition, healthy eating habits, safe drinking water, and proper food hygiene. The project encouraged us to develop social responsibility and recognize the value of community participation in promoting public health awareness.

Overall, this project connected academic learning with community service and provided practical knowledge about the food habits and lifestyles of local residents. It encouraged us to contribute positively to society by promoting awareness of healthy food choices and hygienic practices. The experience strengthened our understanding of community needs and the importance of working together to support a healthier and more informed community.

ACTIVITY LOG FOR THE FIRST WEEK

DAY & DATE	BRIEF DESCRIPTION OF THE DAILY ACTIVITY	LEARNING OUTCOME	Person In-charge Signature
Day – 1	Faculty orientation on CSP objectives; drafted initial survey questions on food habits and hygiene.	Understood project scope & research ethics.	
Day - 2	Reconnaissance survey of Vidavalur village lanes, Anganwadi center, and village marketplace.	Identified key clusters for community outreach.	
Day – 3	Conducted initial interviews with 8 households on morning breakfast habits and staple foods.	Observed traditional vs. modern breakfast patterns.	
Day – 4	Interacted with local grocery and vegetable vendors regarding prices and seasonal availability.	Understood economic factors shaping nutrition.	
Day – 5	Observed morning tiffin routines and meal preparation methods in agricultural families.	Recognized daily work constraints on meal timing.	
Day – 6	Reviewed Week 1 survey forms; tabulated initial responses regarding pulse and vegetable frequency.	Mastered preliminary data organization.	

WEEKLY REPORT

WEEK – 1 (From DT 01/06/2026 to DT 07/06/2026)

Objective of the Activity Done:

To identify the community, understand the food habits of students and residents of Vidavalur Village, and plan the activities required for the Community Service Project.

Detailed Report:

Day 1: Introduction to the Community Service Project

We discussed the objectives and importance of the Community Service Project. We selected food habits among students and community members as our project topic. We planned the activities required to understand the community's eating habits and nutritional awareness.

Day 2: Identification of the Community

We focused on understanding Vidavalur Village in SPSR Nellore District, Andhra Pradesh. We considered the lifestyle of residents, their occupations, and the general availability of food items. This helped us understand the community context for our study.

Day 3: Understanding Daily Food Habits

We planned to study the daily food routines of students and local residents, including breakfast, lunch, and dinner. We identified important areas such as meal timings, food preferences, and the consumption of homemade and outside food.

Day 4: Identification of Food Choices

We identified different food groups to consider during the project, including rice, pulses, vegetables, leafy greens, fruits, and packaged snacks. We also considered how family traditions, economic conditions, and seasonal availability may influence food choices.

Day 5: Understanding Nutritional Awareness

We focused on the importance of balanced nutrition and healthy eating habits. We identified topics such as regular meals, fruit and vegetable consumption, drinking safe water, and reducing excessive consumption of sugary drinks and packaged snacks.

Day 6: Planning the Survey

We planned to collect information from students and community members using questions about their eating habits, food preferences, and hygiene practices. We identified the need to communicate respectfully with participants and record their responses accurately.

Day 7: Review and Planning for the Next Week

We reviewed the activities planned during the first week and discussed the next steps for the project. We prepared to interact with community members and collect information about their food habits during the following week

ACTIVITY LOG FOR THE SECOND WEEK

DAY & DATE	BRIEF DESCRIPTION OF THE DAILY ACTIVITY	LEARNING OUTCOME	Person In-charge Signature
Day – 1	Surveyed 10 families regarding intake of pulses (dal, green gram) and green leafy vegetables.	Recognized nutritional importance of indigenous greens.	
Day - 2	Assessed milk and dairy consumption among children and elder household members.	Identified protein deficits among lower-income homes.	
Day – 3	Interacted with high school students near bus stops regarding breakfast skipping frequency.	Noticed widespread breakfast omission in youth.	
Day – 4	Examined consumption of poultry, eggs, and local fish among non-vegetarian households.	Noted animal protein frequency (1-2 times weekly).	
Day – 5	Conducted an informal check on cooking oils, salt usage, and spice preferences in homes.	Noted high sodium and refined sunflower oil usage.	
Day – 6	Compiled Week 2 questionnaires; summarized dietary trends across occupational groups.	Developed analytical comparative skills.	

WEEKLY REPORT

WEEK – 2 (From Dt 08/06/2026 to Dt 14/06/2026)

Objective of the Activity Done:

To study dietary diversity and protein sources among families in Vidavalur Village by examining the consumption of pulses, green leafy vegetables, milk and dairy products, eggs, poultry, fish, and other dietary components.

Detailed Report:

Day 1: Survey of Pulses and Green Leafy Vegetables
We surveyed 10 families to understand their consumption of pulses such as dal and green gram, along with green leafy vegetables. We collected information about their food choices and dietary practices and leafy greens in daily meals.

Day 2: Assessment of Milk and Dairy Consumption
We assessed the consumption of milk and dairy products among children and elderly members of households. We focused on understanding the frequency of dairy consumption and its place in their daily diets. This activity helped us identify differences in dairy consumption among household members and recognize its importance as part of a balanced diet.

Day 3: Study of Breakfast Habits Among Students
We interacted with high school students near bus stops to understand how frequently they skipped breakfast. We discussed their morning routines and the factors that might influence their breakfast habits.

Day 4: Survey of Animal Protein Sources
We examined the consumption of poultry, eggs, and locally available fish among non-vegetarian households. We gathered information about how frequently these foods were included in family meals.

Day 5: Study of Cooking Oils, Salt, and Spices
We conducted informal observations and discussions about the cooking oils, salt quantities, and spice preferences used in households. We noted the reported use of refined sunflower oil and considered salt usage as an area for nutritional awareness.

Day 6: Compilation of Survey Questionnaires
We organized the questionnaires and information collected during the week's activities. We reviewed responses related to pulses, leafy vegetables, dairy products, breakfast habits, animal protein sources, cooking oils, and salt usage. This process helped us arrange the collected information for further analysis.

Day 7: Analysis of Dietary Trends
We reviewed the collected information and compared dietary practices across different occupational groups. We considered differences in food choices and access to various food sources. This activity helped us develop analytical and comparative skills while understanding the importance of dietary diversity and balanced nutrition.

ACTIVITY LOG FOR THE THIRD WEEK

DAY & DATE	BRIEF DESCRIPTION OF THE DAILY ACTIVITY	LEARNING OUTCOME	Person In-charge Signature
Day – 1	Surveyed sources of drinking water: municipal supply, RO water kiosks, and household bores.	Gauged community access to safe potable water.	
Day - 2	Checked domestic water storage vessels, covering practices, and ladling hygiene in 8 homes.	Identified risks of secondary bacterial contamination.	
Day – 3	Observed handwashing practices before meal consumption among children and adult laborers.	Reinforced critical role of soap handwashing.	
Day – 4	Demonstrated proper washing of raw vegetables and cutting practices to prevent nutrient loss.	Learned practical public health communication.	
Day – 5	Inspected local street tiffin stalls regarding oil reuse, fly protection, and plate cleanliness.	Assessed commercial street-food hygiene standards.	
Day – 6	Held a team debriefing session on hygiene indicators and prepared Week 3 summary report.	Synthesized environmental sanitation data.	

WEEKLY REPORT

WEEK – 3 (From Dt 15/06/2026 to Dt 21/06/2026)

Objective of the Activity Done:

To assess drinking water sources, household water storage practices, personal hygiene, and food safety measures in Vidavalur Village. The objective was to understand community access to safe drinking water and identify hygiene practices that may influence public health.

Detailed Report:

Day 1: Survey of Drinking Water Sources
We surveyed the drinking water sources used by community members, including municipal water supply, RO water kiosks, and household borewells. We gathered information about the sources commonly used by families and their access to drinking water.

Day 2: Assessment of Household Water Storage
We inspected water storage vessels and storage practices in eight households. We observed whether containers were covered and how water was taken out for consumption. We also considered the cleanliness of storage vessels and the hygiene of ladles used to collect water.

Day 3: Observation of Handwashing Practices
We observed handwashing practices before meals among children and adult labourers. We focused on whether people used soap and followed appropriate handwashing practices.

Day 4: Demonstration of Vegetable Washing and Cutting Practices
We demonstrated appropriate methods for washing raw vegetables and discussed suitable cutting practices to help preserve their nutritional value. We explained the importance of cleaning vegetables before preparation and maintaining hygienic conditions while handling food.

Day 5: Inspection of Street Food Hygiene
We inspected local street-food and tiffin stalls to understand their food hygiene practices. We observed oil reuse, protection of food from flies, and the cleanliness of plates and serving utensils. This activity helped us assess visible food safety practices and understand the importance of maintaining hygienic conditions in food establishments.

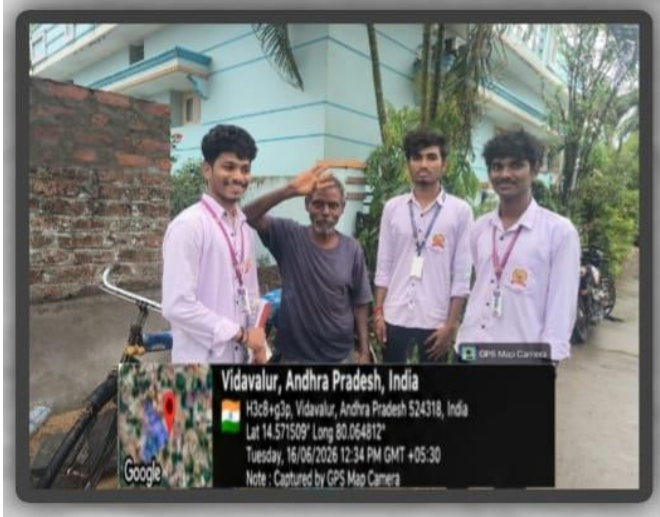

Day 6: Public Health Awareness and Team Discussion
We discussed the importance of safe drinking water, clean food preparation, proper handwashing, and hygienic food handling. We shared our observations with team members and discussed how simple awareness activities could encourage better hygiene practices. This activity helped us develop practical public health communication skills.

Day 7: Review of Hygiene Indicators and Report Preparation
We conducted a team debriefing session to review the observations and information collected during the week. We organized the details related to drinking water sources, household storage, handwashing, vegetable preparation, and street-food hygiene.

ACTIVITY LOG FOR THE FOURTH WEEK

DAY & DATE	BRIEF DESCRIPTION OF THE DAILY ACTIVITY	LEARNING OUTCOME	Person In-charge Signature
Day – 1	Visited local retail *kirana* stores; surveyed popular packaged snack brands and prices.	Analyzed market penetration of processed snacks.	
Day - 2	Interviewed 15 adolescent students regarding daily pocket money expenditures on snacks.	Quantified student consumption of salty snacks & soda.	
Day – 3	Conducted awareness talks on nutritional labels (checking sugar, sodium, and trans fats).	Taught critical consumer literacy to students.	
Day – 4	Discussed affordable homemade snack substitutes (roasted groundnuts, puffed rice, boiled chana). Taught critical consumer literacy to students. Offered practical, costeffective nutrition a	Offered practical, costeffective nutrition alternatives.	
Day – 5	Surveyed daily fluid and plain water intake among students during school hours.	Identified widespread mild dehydration in youth.	
Day – 6	Consolidated snack survey records and designed informative flashcards for scho ol presentations.	Enhanced visual content creation skills.	

WEEKLY REPORT

WEEK – 4 (From Dt 22/06/2026 to Dt 28/06/2026)

Objective of the Activity Done:

To study the consumption of packaged foods and snacks among students in Vidavalur Village, understand their snack-buying habits and spending patterns, create awareness about nutritional labels, and assess students' drinking water and hydration practices during school hours.

Detailed Report:

Day 1: Survey of Local Retail Stores
We visited local kirana stores to identify commonly available packaged snack brands and their prices. We observed the variety of snacks and beverages available to students and considered their affordability and popularity.

Day 2: Survey of Students' Snack Expenditure
We interviewed 15 adolescent students to understand how much of their daily pocket money they spent on snacks. We collected information about their purchasing habits and preferences for salty snacks and soft drinks.

Day 3: Awareness of Nutritional Labels
We conducted awareness talks about reading nutritional labels on packaged food products. We explained the importance of checking sugar, sodium, and trans-fat content before purchasing food items. This activity helped students develop critical consumer awareness and make more informed food choices.

Day 4: Promotion of Affordable Homemade Snacks
We discussed affordable alternatives to packaged snacks, including roasted groundnuts, puffed rice, and boiled chickpeas (chana). We explained that choosing suitable homemade snacks can be a practical way to improve everyday food choices.

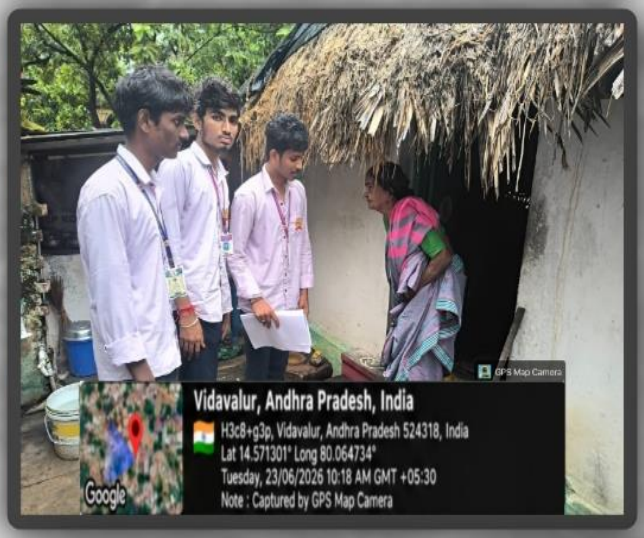

Day 5: Assessment of Drinking Water Intake
We surveyed students about their daily fluid intake and consumption of plain water during school hours. We discussed the importance of drinking sufficient safe water throughout the day, especially during hot weather and physical activity. This activity helped us understand students' hydration habits and identify the need for further awareness about adequate water intake.

Day 6: Preparation of Educational Flashcards
We consolidated the information collected through the snack survey and organized the responses for review. We also designed informative flashcards covering nutritional labels, healthy snack alternatives, and the importance of drinking water.

Day 7: Review of Survey Findings and Planning
We reviewed the activities conducted during the fourth week and discussed the information gathered from local shops and students. We considered the relationship between snack availability, affordability, pocket money, and students' food choices. We also prepared the key points for future awareness presentations on packaged foods, healthy snacking, and hydration.

ACTIVITY LOG FOR THE FIFTH WEEK

DAY & DATE	BRIEF DESCRIPTION OF THE DAILY ACTIVITY	LEARNING OUTCOME	Person In-charge Signature
Day – 1	Organized a community awareness gathering near the local community hall on balanced diets.	Practiced public speaking & health advocacy.	
Day - 2	Presented chart demonstrations on the "My Plate" concept using familiar Andhra cuisine.	Communicated complex nutrition ideas simply.	
Day – 3	Addressed maternal and child nutrition: discussed ironrich greens and pregnancy care.	Connected dietary habits with maternal wellness.	
Day – 4	Distributed informative self-care leaflets regarding boiling water and reducing white sugar.	Disseminated printed public educational material.	
Day – 5	Collected qualitative community feedback regarding the practical utility of our dietary tips.	Evaluated community engagement reception.	
Day – 6	Held a team evaluation meeting to tally campaign participation and feedback metrics.	Strengthened collaborative evaluation methods.	

WEEKLY REPORT

WEEK – 5 (From Dt 29/06/2026 to Dt 05/07/2026)

Objective of the Activity Done:

To conduct a community nutrition awareness campaign in Vidavalur Village, educate residents about balanced diets and maternal and child nutrition, distribute health information materials, and evaluate community participation and feedback.

Detailed Report:

Day 1: Planning the Community Awareness Programme
We planned a community awareness gathering near the local community hall in Vidavalur Village. We organized the key topics to be discussed, including balanced diets, healthy food choices, and the importance of proper nutrition.

Day 2: Awareness on Balanced Diets
We organized a community awareness gathering near the local community hall to explain the importance of balanced diets. We presented charts demonstrating the *My Plate* concept using familiar Andhra cuisine. We explained how different food groups can be included in daily meals to support good health.

Day 3: Awareness of Maternal and Child Nutrition
We discussed the importance of maternal and child nutrition with community members. We highlighted the nutritional value of iron-rich green leafy vegetables and the importance of appropriate dietary practices during pregnancy.

Day 4: Distribution of Health Awareness Leaflets
We distributed informative leaflets containing practical health and self-care messages. The materials emphasized boiling drinking water where appropriate and reducing excessive consumption of added sugar.

Day 5: Collection of Community Feedback
We collected feedback from community members about the usefulness and practicality of the dietary suggestions shared during the awareness campaign. We listened to their opinions and considered how the information could be applied to their daily lives.

Day 6: Evaluation of Campaign Participation
We conducted a team evaluation meeting to review participation in the awareness campaign and organize the feedback received. We discussed the reach of the programme, the distribution of educational materials, and the community's response to the nutrition messages.

Day 7: Review and Preparation of the Weekly Report
We reviewed the activities carried out during the fifth week and organized the information collected from the awareness programme. We summarized the key topics covered, including balanced diets, maternal and child nutrition, safe drinking water, and reducing excessive sugar consumption. We also reviewed the feedback to identify areas for improvement in future community awareness activities.

ACTIVITY LOG FOR THE SIXTH WEEK

DAY & DATE	BRIEF DESCRIPTION OF THE DAILY ACTIVITY	LEARNING OUTCOME	Person In-charge Signature
Day – 1	Systematic cross-checking and verification of all 45 household dietary survey sheets.	Mastered rigorous data auditing standards.	
Day - 2	Consolidated quantitative findings into structured statistical summary tables.	Developed primary data visualization skills.	
Day – 3	Drafted Chapter 5 (Survey Outcomes & Identified Community Dietary Problems).	Honed objective academic report writing.	
Day – 4	Formulated short-term and long-term community nutritional action plans.	Applied strategic thinking to public health policy.	
Day – 5	Conducted exit meeting with village representatives and thanked community stakeholders.	Cultivated community accountability & gratitude.	
Day – 6	Completed Program Book documentation, selfevaluation, and mentor endorsements.	Achieved comprehensive project closure.	

WEEKLY REPORT

WEEK – 6 (From Dt 06/07/2026 to Dt 12/07/2026)

Objective of the Activity Done:

To verify and consolidate the dietary survey data collected from 45 households, prepare statistical summary tables, document survey outcomes, develop community nutrition action plans, and complete the final documentation of the Community Service Project.

Detailed Report:

Day 1: Verification of Household Survey Sheets
We systematically reviewed the 45 household dietary survey sheets collected during the Community Service Project. We checked the responses for completeness, consistency, and accuracy.

Day 2: Consolidation of Survey Data
We organized the verified survey responses into structured statistical summary tables. The information covered dietary habits, food choices, nutritional practices, and other relevant survey topics.

Day 3: Preparation of Survey Outcomes
We drafted Chapter 5 of the project report, focusing on survey outcomes and the identification of community dietary problems. We organized the observations and findings from the household survey into a clear academic format.

Day 4: Development of Nutritional Action Plans
We formulated short-term and long-term action plans to address the nutritional concerns identified through the survey. The proposed plans focused on promoting balanced diets, improving nutritional awareness, encouraging healthy food habits, and strengthening food hygiene practices.

Day 5: Exit Meeting with Community Representatives
We conducted an exit meeting with village representatives and thanked the community members and other stakeholders who supported our project activities. We acknowledged their cooperation in participating in surveys and sharing information about their food habits.

Day 6: Completion of Project Documentation
We completed the required Community Service Project documentation, including the Program Book, self-evaluation, and mentor endorsement sections. We reviewed the available records to ensure that the project activities and collected information were properly documented.

Day 7: Final Review and Project Closure
We reviewed the work completed during the six weeks of the project, including household surveys, food habit observations, hygiene awareness activities, community nutrition campaigns, and data analysis. We organized the final report sections and checked the documentation for completeness. This activity marked the completion of the planned project work and helped us reflect on the knowledge and skills gained.

CHAPTER 5: OUTCOMES DESCRIPTION

Details of the Socio-Economic Survey of the Village/Habitation. Attach the questionnaire prepared for the survey.

As part of the Community Service Project titled **"A Study on Food Habits of Students and Community Members in Vidavalur Village, SPSR Nellore District, Andhra Pradesh,"** a socio-economic and dietary survey was conducted to understand the living conditions, food habits, and nutritional practices of local residents. The survey covered 45 households and focused on identifying the factors that influence people's daily food choices and dietary diversity.

The survey collected information about family size, occupations, economic conditions, and access to food resources. It also examined daily meal patterns, breakfast habits, and the consumption of pulses, green leafy vegetables, fruits, milk, dairy products, eggs, poultry, and fish. In addition, information was gathered about the use of packaged snacks, sugary drinks, cooking oils, salt, and drinking water.

Special attention was given to household hygiene and food safety practices, including drinking water sources, water storage methods, handwashing habits, vegetable cleaning, and food preparation. Interactions with students and community members helped us understand their food preferences, nutritional awareness, and daily eating routines.

The survey activities highlighted the importance of examining food habits in relation to economic conditions, food availability, family traditions, and individual preferences. The information collected was organized and reviewed to identify areas where greater awareness of balanced nutrition, healthy snacking, adequate water intake, and food hygiene could be beneficial. The survey also provided an opportunity to understand the community's needs and consider practical recommendations suited to local conditions.

Overall, the socio-economic survey helped connect academic learning with real-life community needs. It improved our skills in data collection, observation, communication, analysis, and report writing. The information gathered from the 45 households provides a basis for describing local dietary practices and proposing suitable nutritional awareness activities.

Questionnaire Prepared for the Survey:

The questionnaire included questions about household details, occupation, food expenditure, daily meal patterns, breakfast consumption, intake of fruits and vegetables, consumption of pulses and protein-rich foods, milk and dairy products, packaged snacks, drinking water, and food hygiene practices. The questionnaire used for collecting responses should be attached to this chapter as supporting documentation.

Describe the problems you have identified in the community

During the Community Service Project on food habits in Vidavalur Village, SPSR Nellore District, Andhra Pradesh, several areas of concern related to dietary practices, nutrition awareness, and food hygiene were identified through household surveys, student interactions, and community observations.

1. **Unbalanced Dietary Habits:** Some households may not consume a sufficiently diverse diet containing pulses, green leafy vegetables, fruits, and other nutritious foods regularly. Economic conditions and the availability of food items may influence their daily food choices.

2. **Skipping Breakfast Among Students:** Interactions with high school students indicated that skipping breakfast was an important concern. Irregular breakfast habits may affect students' energy levels, concentration, and daily activities.

3. **Limited Dietary Diversity:** The survey examined the frequency of consumption of pulses, milk and dairy products, eggs, poultry, and fish. Differences in consumption patterns highlighted the importance of promoting a balanced diet that includes a variety of affordable, locally available protein sources.

4. **Consumption of Packaged Snacks:** Packaged salty snacks and sugary drinks were identified as areas requiring attention among students. Limited awareness of nutritional labels may make it difficult for young consumers to compare sugar, sodium, and trans-fat content when choosing packaged foods.

5. **Drinking Water and Hydration Practices:** The project examined students' water intake and household drinking water practices. Inadequate water consumption and improper storage or handling of drinking water can be concerns that require further awareness and attention.

6. **Food Hygiene and Safety:** Observations focused on handwashing before meals, cleaning vegetables, storing food safely, and maintaining cleanliness at local tiffin stalls. These practices are important because poor hygiene can increase the risk of food contamination.

7. **Household Cooking Practices:** The project examined the use of cooking oils, salt, and spices in household food preparation. Awareness of appropriate salt consumption and healthy cooking practices can help families make more informed dietary choices.

8. **Need for Nutrition Awareness:** The survey and community interactions highlighted the value of providing simple, practical information about balanced diets, maternal and child nutrition, healthy snacks, safe drinking water, and food hygiene.

Conclusion:

The project helped identify important areas for improving food habits and nutrition awareness in Vidavalur Village. Promoting balanced diets, regular breakfast consumption, healthier snack choices, safe drinking water, and proper food hygiene can support community well-being. These concerns should be addressed through practical awareness programmes that consider local food availability, affordability, and the actual needs of community members.

Short-term and long term action plan for possible solutions for the problems identified and that could be recommended to the concerned authorities for implementation.

Short-Term Action Plan:

1. **Nutrition Awareness:** Conduct awareness programmes in schools and the village about balanced diets and healthy eating habits.
2. **Healthy Breakfast:** Encourage students to eat breakfast regularly and avoid skipping meals.
3. **Healthy Snacks:** Promote affordable, nutritious homemade snacks such as fruits, roasted groundnuts, puffed rice, and boiled chickpeas.
4. **Food Hygiene:** Educate families about washing vegetables, keeping food covered, washing hands before meals, and maintaining clean cooking areas.
5. **Safe Drinking Water:** Create awareness about safe drinking water, hygienic water storage, and adequate daily water intake.
6. **Nutrition Information:** Explain food labels to students and community members to help them reduce excessive sugar, salt, and unhealthy packaged foods.

Long-Term Action Plan:

1. **School Nutrition Programmes:** Encourage schools to conduct regular nutrition education sessions and promote healthy food choices among students.
2. **Community Health Camps:** Request local health authorities to organise periodic health check-ups and nutrition awareness camps.
3. **Kitchen Gardens:** Motivate households to grow vegetables and leafy greens to improve access to nutritious foods.
4. **Government Scheme Awareness:** Inform eligible families about available nutrition programmes and maternal and child health services.
5. **Food Safety Monitoring:** Request the concerned authorities to conduct regular inspections of local food stalls and promote hygienic food preparation.
6. **Continuous Monitoring:** Encourage village authorities, schools, and health workers to monitor community nutrition practices and review improvements periodically.

Recommendations to the Concerned Authorities:

The Gram Panchayat, village health workers, local schools, and concerned health departments should work together to promote balanced diets, safe drinking water, food hygiene, and nutrition awareness. Regular community programmes and follow-up surveys can help assess progress and improve the health and well-being of students and community members.

Description of the Community awareness programme/s conducted w.r.t the problems and their outcomes.

Description of the Community Awareness Programmes Conducted and Their Outcomes

As part of the Community Service Project (CSP), awareness programmes were conducted in Vidavalur Village to educate students and community members about healthy food habits, balanced diets, and food safety.

1. **Balanced Diet Awareness:** Community members were educated about the importance of consuming a balanced diet containing cereals, pulses, vegetables, fruits, milk, and other protein-rich foods. The My Plate concept was explained using familiar local food items.

2. **Student Nutrition Awareness:** Students were encouraged to eat breakfast regularly and reduce the consumption of unhealthy packaged snacks. Affordable alternatives such as fruits, roasted groundnuts, puffed rice, and boiled chickpeas were suggested.

3. **Food Hygiene and Safe Drinking Water:** Families were advised to wash vegetables properly, wash their hands before meals, keep food covered, and store drinking water hygienically. The importance of drinking safe water was also explained.

4. **Nutrition and Maternal Health:** Awareness was created about iron-rich leafy vegetables, maternal nutrition, and the importance of proper nutrition for children and pregnant women. Leaflets containing health and nutrition tips were distributed.

5. **Healthy Cooking Practices:** Community members were encouraged to reduce excessive salt and sugar consumption and follow safer cooking and food-handling practices.

Outcomes of the Programme:
The awareness programmes provided students and community members with information about balanced diets, healthy food choices, food hygiene, and safe drinking water. The activities encouraged participants to consider healthier eating habits and understand the importance of nutrition in maintaining good health. Feedback was collected from participants to assess their understanding and engagement. These programmes also helped the project team improve communication, teamwork, and community interaction skills.

Conclusion: The community awareness programmes helped spread knowledge about healthy food habits and preventive health practices. Continued awareness activities and support from local authorities can further encourage healthier lifestyles in Vidavalur Village.

Report of the mini-project work done in the related subject w.r.t the habitation/village.

1. INTRODUCTION AND BACKGROUND OF THE PROJECT

Food is one of the basic needs of human beings. Healthy food habits are essential for proper growth, development, and the prevention of various health problems. A balanced diet contains carbohydrates, proteins, fats, vitamins, minerals, fibre, and water in appropriate amounts.

Food habits are influenced by several factors, including family income, occupation, availability of food, culture, personal preferences, and nutritional awareness. Students require nutritious food to support their physical growth, concentration, and academic performance. Similarly, adults and elderly people need a balanced diet to maintain their health and well-being.

As part of the Community Service Project (CSP), a study on the food habits of students and community members was conducted in Vidavalur Village, Vidavalur Mandal, SPSR Nellore District, Andhra Pradesh.

The project focused on household food practices, breakfast habits among students, consumption of fruits and vegetables, dietary diversity, packaged snacks, drinking-water practices, and food hygiene. Information was collected through household surveys, interactions with students and community members, and observations of local food practices.

The project also included community awareness activities about balanced diets, healthy snacks, safe drinking water, and hygienic food preparation. The findings were used to identify areas where nutrition awareness and healthy food practices could be encouraged.

Importance of the Study:
This study helps us understand the importance of healthy eating habits in everyday life. It also provides an opportunity to connect classroom learning with real-life community needs and develop skills in communication, teamwork, observation, and data collection.

2. OBJECTIVES AND IMPORTANCE OF THE STUDY

2.1 Objectives of the Study

The main objective of this mini-project is to understand the food habits of students and community members in Vidavalur Village, SPSR Nellore District, Andhra Pradesh. The study focuses on daily dietary practices, nutritional awareness, food safety, and the importance of maintaining a balanced diet.

The specific objectives of the study are:

1. To study the daily food habits of students and community members in the village.
2. To collect information about household dietary practices and regular meal patterns.
3. To understand the importance of breakfast and identify whether students regularly consume breakfast before attending school or college.
4. To examine the consumption of cereals, pulses, green leafy vegetables, fruits, milk, eggs, and other protein-rich foods.
5. To understand the role of family income, occupation, food availability, and personal preferences in influencing food choices.
6. To study the consumption of packaged snacks and understand awareness of nutritional labels printed on food packets.
7. To observe household drinking-water sources, water storage methods, and daily water consumption practices.
8. To understand the importance of food hygiene, including handwashing, vegetable cleaning, proper food storage, and clean cooking environments.
9. To identify areas where nutrition awareness and healthy food practices could be improved.
10. To create awareness among students and community members about balanced diets and nutritious food choices.
11. To encourage the consumption of affordable and locally available nutritious foods.
12. To suggest practical measures that families, schools, health workers, and village authorities can adopt to promote better food habits.

2.2 Importance of the Study

Food is essential for the growth, development, and proper functioning of the human body. A healthy diet provides the energy and nutrients required to perform daily activities and maintain general well-being. Therefore, understanding food habits is important for improving the health of individuals and the community.

Importance of Nutrition for Students
Students require adequate nutrition for physical growth, concentration, learning, and participation in daily activities. Eating breakfast regularly and consuming a variety of nutritious foods can support their overall well-being. Awareness of healthy eating habits can also help students make better food choices when purchasing snacks outside their homes or schools.

Importance of a Balanced Diet
A balanced diet includes a suitable variety of cereals, pulses, vegetables, fruits, milk, and other protein-rich foods. Rice and other cereals provide energy, while pulses, eggs, milk, and other protein sources support growth and tissue maintenance. Fruits and vegetables provide vitamins, minerals, and dietary fibre. Including different food groups in daily meals helps improve dietary variety.

Importance for Families and Community Members
Families play an important role in developing food habits because meals are usually planned and prepared at home. Awareness of affordable nutritious foods can help households make suitable food choices according to their needs and available resources. Locally available foods such as pulses, green gram, leafy vegetables, seasonal fruits, groundnuts, and eggs can contribute to a varied diet.

Importance of Food Hygiene and Safe Water
Healthy food habits also include hygienic food preparation and safe drinking-water practices. Washing hands before meals, cleaning vegetables properly, covering cooked food, and keeping water-storage containers clean can help reduce the risk of food- and water-related illnesses. Proper hygiene is especially important for children and elderly people.

Importance of the Community Service Project
This mini-project connects academic learning with real-life community needs. Through household surveys, student interactions, and community awareness activities, the project provides an opportunity to understand local dietary practices and identify areas requiring attention.
The project also helps students develop communication, teamwork, observation, data collection, and report-writing skills. The information gathered can support future nutrition awareness activities in Vidavalur Village.

3. METHODOLOGY AND SURVEY CONDUCTED IN THE VILLAGE

3.1 Study Area

The mini-project was conducted in Vidavalur Village, Vidavalur Mandal, SPSR Nellore District, Andhra Pradesh. The study focused on understanding the food habits of students and community members, including their dietary practices, food choices, and hygiene habits.

3.2 Methodology

1. Household Survey: A questionnaire was used to collect information about household food habits, meal patterns, occupation, and dietary diversity. A total of **45 household survey sheets** were cross-checked during project finalization.

2. Student Interaction: High-school students were asked about breakfast habits, snack preferences, pocket money spent on snacks, and water intake.

3.Dietary Diversity: The study examined the consumption of cereals, pulses, green leafy vegetables, fruits, milk, eggs, poultry, and fish to understand the importance of a varied diet.

4.Drinking-Water Practices: The team gathered information about household drinking-water sources and storage methods. Awareness was created about safe drinking water and adequate hydration.

5.Food Hygiene: Household and local food-stall practices were considered, including handwashing, vegetable cleaning, food covering, and maintaining cleanliness.

6.Packaged Foods: Local shops were visited to observe the availability of packaged snacks. Students were educated about reading nutrition labels and choosing affordable, healthy alternatives.

7. Awareness Activities: Community members were educated about balanced diets, healthy snacks, maternal and child nutrition, and hygienic food practices.

3.3 Data Collection and Analysis

The information collected through questionnaires, discussions, and observations was organized systematically. The household survey sheets were cross-checked to identify important topics for nutrition awareness and prepare recommendations.

4. OBSERVATIONS AND PROBLEMS IDENTIFIED

The household survey and interactions with students and community members helped us understand various food habits and identify areas requiring attention in Vidavalur Village.

4.1 Major Observations

1. Balanced Diet: The study examined the consumption of cereals, pulses, vegetables, fruits, milk, and other protein-rich foods. Awareness of dietary diversity is important for maintaining good health.

2. Breakfast Habits: Interactions with students included discussions about skipping breakfast. Students were encouraged to eat breakfast regularly to support their health and daily activities.

3. Packaged Snacks: Local shops were visited to observe packaged snacks. Awareness about nutrition labels and healthier snack alternatives was promoted.

4. Dietary Diversity: The project examined the consumption of pulses, green leafy vegetables, milk, eggs, poultry, and fish. Including different food groups in daily meals was encouraged.

5. Drinking Water: Household water sources and storage practices were considered. The importance of safe drinking water and adequate hydration was explained.

6. Food Hygiene: Handwashing, washing vegetables, covering cooked food, and maintaining clean cooking areas were identified as important hygiene practices.

7. Cooking Practices: Awareness was created about avoiding excessive salt and sugar and following appropriate food preparation practices.

4.2 Problems Identified

The following areas were identified as requiring attention through nutrition education:

- Need for greater awareness of balanced diets and dietary diversity.
- Importance of regular breakfast consumption among students.
- Need to make informed choices about packaged snacks.
- Importance of consuming adequate fruits, vegetables, and protein-rich foods.
- Need to maintain safe drinking-water storage and adequate hydration.
- Importance of proper food hygiene and clean cooking environments.

4. COMMUNITY AWARENESS PROGRAMMES AND RECOMMENDATIONS

As part of the Community Service Project, awareness programmes were conducted in Vidavalur Village to educate students and community members about healthy food habits, balanced diets, and food hygiene.

5.1 Community Awareness Programmes

1. Balanced Diet Awareness: Community members were educated about the importance of consuming cereals, pulses, vegetables, fruits, milk, and protein-rich foods. The My Plate concept was explained using familiar Andhra food items.

2. Healthy Snacking: Students were encouraged to choose affordable homemade snacks such as roasted groundnuts, puffed rice, fruits, and boiled chickpeas instead of frequently consuming less nutritious packaged snacks.

3. Food Hygiene: Awareness was created about washing hands before meals, cleaning vegetables properly, covering cooked food, and maintaining clean cooking areas.

4. Safe Drinking Water: Families were advised to use safe drinking water, keep storage containers clean and covered, and maintain proper water-handling practices.

5. Maternal and Child Nutrition: The importance of nutritious food for children and pregnant women was explained. Awareness was also created about consuming iron-rich leafy vegetables.

6. Distribution of Leaflets: Information leaflets containing practical health messages were distributed to encourage safe drinking-water practices and reduce excessive sugar consumption.

5.2 Outcomes of the Awareness Programmes

The programmes provided an opportunity to share information about balanced diets, healthy snacks, food hygiene, and safe drinking water. Students and community members received practical suggestions for improving their daily food habits.

The activities also helped the project team develop communication, teamwork, and community interaction skills.

5.3 Recommendations

1. Conduct regular nutrition awareness programmes in schools and villages.
2. Encourage students to eat breakfast regularly and choose nutritious snacks.
3. Promote the consumption of locally available fruits, vegetables, pulses, and other nutritious foods.
4. Educate families about reading nutrition labels on packaged foods.
5. Encourage safe drinking-water storage and hygienic food preparation.
6. Request local health workers to organize nutrition education and health awareness camps.
7. Encourage households to grow vegetables through kitchen gardens
8. wherever possible.

5.4 Role of Local Authorities

The Gram Panchayat, local schools, village health workers, and concerned health departments should work together to promote healthy food habits. Regular awareness activities and follow-up surveys can help identify community needs and encourage healthier lifestyles.

Suggested Figure 5: Paste a photograph of your team conducting the nutrition awareness programme or distributing information leaflets.

Caption: *Figure 5: Community awareness programme on balanced diets and healthy food habits.*

6. OUTCOMES, SUGGESTIONS AND CONCLUSION

6.1 Outcomes of the Study

The mini-project on food habits in Vidavalur Village helped us understand the importance of healthy eating habits and nutrition awareness. Household surveys, student interactions, and community observations provided useful information about local dietary practices.

The major outcomes of the project were:

1. A total of 45 household dietary survey sheets were cross-checked and organized.
2. Information was collected about household food habits, meal patterns, and dietary diversity.
3. Student interactions helped explore breakfast habits and packaged snack preferences.
4. The importance of safe drinking water and food hygiene was studied.
5. Community awareness activities promoted balanced diets and healthier food choices.
6. The project improved our communication, teamwork, observation, and data collection skills.

6.2 Suggestions for Improvement

The following suggestions may help improve food habits in the community:

- Encourage students to eat breakfast regularly.
- Include a variety of vegetables, fruits, pulses, and protein-rich foods in daily meals.
- Prefer affordable, nutritious homemade snacks over frequent consumption of less nutritious packaged foods.
- Maintain clean and covered drinking-water containers.
- Follow proper handwashing and hygienic food preparation practices.
- Conduct regular nutrition awareness programmes in schools and villages.
- Encourage families to grow vegetables in kitchen gardens wherever possible.

6.3 Role of Students in Community Development

Students can contribute to community development by spreading awareness about nutrition, hygiene, and healthy lifestyles. They can organize awareness campaigns, distribute educational leaflets, interact with families, and encourage people to adopt healthy practices.

Working with community members also helps students understand real-life problems and develop social responsibility.

6.4 Conclusion

The mini-project titled **"A Study on Food Habits of Students and Community Members in Vidavalur Village, SPSR Nellore District, Andhra Pradesh"** provided valuable experience in understanding food habits and nutrition-related practices.

Through household surveys, student interactions, and community awareness activities, the project highlighted the importance of balanced diets, regular meals, healthy snacks, safe drinking water, and food hygiene.

The study emphasized the need for continuous nutrition education and cooperation among families, schools, health workers, and village authorities. Following simple and affordable healthy food practices can contribute to better health and well-being.

Overall, the project helped connect academic learning with community needs and encouraged us to contribute positively to society.

CHAPTER 6: RECOMMENDATIONS AND CONCLUSIONS OF THE MINI PROJECT

Recommendations

Based on the study of food habits among students and community members in Vidavalur Village, the following recommendations are suggested:

1. **Balanced Diet: Encourage families to consume a variety of foods, including cereals, pulses, green leafy vegetables, fruits, milk, and other protein-rich foods.**
2. **Healthy Eating Habits: Students should be encouraged to eat breakfast regularly and maintain proper meal timings.**
3. **Healthy Snacks: Promote affordable homemade snacks such as fruits, roasted groundnuts, puffed rice, and boiled chickpeas instead of frequently consuming less nutritious packaged snacks.**
4. **Food Hygiene: Create awareness about handwashing, washing vegetables, covering cooked food, and maintaining clean cooking areas.**
5. **Safe Drinking Water: Encourage households to use safe drinking water and keep water-storage containers clean and covered.**
6. **Nutrition Awareness: Schools and village authorities should organize regular awareness programmes about balanced diets and healthy food habits.**
7. **Community Participation: Encourage local health workers, teachers, and village authorities to work together to improve nutrition awareness.**
8. **Kitchen Gardens: Motivate families to grow vegetables and leafy greens at home wherever possible to improve access to nutritious foods.**

2. Conclusion

The mini-project titled "A Study on Food Habits of Students and Community Members in Vidavalur Village, SPSR Nellore District, Andhra Pradesh" provided an opportunity to understand community dietary practices and the importance of nutrition awareness.

Through household surveys, student interactions, and community awareness activities, the project examined food choices, breakfast habits, dietary diversity, packaged snacks, drinking-water practices, and food hygiene. A total of 45 household dietary survey sheets were cross-checked during the project.

The awareness programmes highlighted the importance of balanced diets, healthy snacks, safe drinking water, and hygienic food preparation. The study also helped us develop communication, teamwork, observation, and data collection skills.

In conclusion, promoting healthy food habits requires continuous awareness and cooperation among families, schools, health workers, and village authorities. Following simple and affordable nutrition practices can contribute to improving the health and well-being of students and community members in Vidavalur Village.

Student Self-Evaluation for the Community Service Project

Student Name:p.vinod kumar, n.mokshagnya teja, y.chandra Babu, s.chaithanya, p.venkatesh

Registration No:24jna33127, 25jna33506, 24jna33174, 24jna33154, 24jna33124

Period of CSP: From: To:

Date of Evaluation:

Name of the Person in-charge:
Address with mobile number:

Please rate your performance in the following areas:

Rating Scale: 1 is lowest and 5 is highest rank

1) Oral communication	**1**	**2**	**3**	**4**	**5**
2) Written communication	**1**	**2**	**3**	**4**	**5**
3) Proactiveness	**1**	**2**	**3**	**4**	**5**
4) Interaction ability with community	**1**	**2**	**3**	**4**	**5**
5) Positive Attitude	**1**	**2**	**3**	**4**	**5**
6) Self-confidence	**1**	**2**	**3**	**4**	**5**
7) Ability to learn	**1**	**2**	**3**	**4**	**5**
8) Work Plan and organization	**1**	**2**	**3**	**4**	**5**
9) Professionalism	**1**	**2**	**3**	**4**	**5**
10) Creativity	**1**	**2**	**3**	**4**	**5**
11) Quality of work done	**1**	**2**	**3**	**4**	**5**
12) Time Management	**1**	**2**	**3**	**4**	**5**
13) Understanding the Community	**1**	**2**	**3**	**4**	**5**
14) Achievement of Desired Outcomes	**1**	**2**	**3**	**4**	**5**
15) OVERALL PERFORMANCE	**1**	**2**	**3**	**4**	**5**

Date: **Signature of the Student**

Evaluation by the Person in-charge in the Community/Habitation
